

DRAINABLE TOPAZ NEO

Fully Drainable & Non-Freezing

In the absence of glycol and / or thermal load in the bundles, the coils may be exposed to freezing. The complete drain of the circuits is then unreliable, JACIR innovates and offers two additional options for the TOPAZ NEO range.

PRODUCT SUPPORT

DRAINABLE TOPAZ NEO

Drainable coils

This option has a specific copper collectors design and a particular arrangement of the tubes, thus forming a layout and geometry of the coils that allow complete draining by gravity without the injection of compressed air.

Integrated drain protection

In addition to drainable coils option, JACIR offers automatic power and flow regulations (including valves, common headers...). An electrical heat tracing and antifreeze protection is necessary for process main piping until the electrical valve.

Benefits

∞ Simplified maintenance, fast and totally safe.

Applications

∞ All adiabatic coolers TOPAZ NEO range.
